PROFESSIONAL SUMMARY

Engineering lead (AVP) with **8 years of experience** building enterprise-scale backend services and full-stack applications in **Java (Spring Boot)** and **Python** for global financial services. At Citi, has delivered **7+ projects in the Risk Management domain** and is currently building an **agentic AI system for risk identification** using LangGraph, Google ADK, LangChain and retrieval-augmented generation (RAG) on pgvector. Leads and mentors a team of 6+ engineers and partners with senior stakeholders on risk technology architecture. Pursuing an **M.Tech in AI/ML at BITS Pilani** (NLP and Unsupervised Deep Learning). Dual Appian certified.

TECHNICAL SKILLS

AI & ML	AI agents (LangGraph, Google ADK, LangChain), agentic workflows & tool use, RAG (embeddings, chunking, pgvector), LLM integration, prompt engineering, NLP, deep learning
Languages & Backend	Java (Spring Boot, Spring MVC, Hibernate), Python, RESTful APIs, microservices & distributed systems, Kafka (event-driven)
Data	PostgreSQL / pgvector, MySQL, Elasticsearch, data modelling, data pipelines, text search & indexing
Cloud, DevOps & Testing	Kubernetes, Git, Jenkins, Harness, Maven, Gradle, SonarQube, CI/CD, JUnit, Mockito, BDD
Front End & Low-code	React, Angular; Appian (SAIL, Process Modeler, Integrations, CDTs)
AI Dev Tools	GitHub Copilot, Devin
Leadership	Team leadership & mentoring (6+ engineers), stakeholder management, technology risk & compliance, Agile/Scrum

PROFESSIONAL EXPERIENCE

Citi

Pune, Maharashtra · Jan 2022 – Present

Assistant Vice President — Engineering Promoted

Mar 2025 – Present

- Building an AI agent that enhances risk identification for end users of Citi's risk management platform, with multi-step task execution and tool use orchestrated in LangGraph and Google ADK, and LangChain for LLM integration.
- Built the RAG retrieval layer — document chunking strategies and embeddings in PostgreSQL with pgvector — to ground agent responses in internal documents.
- Delivered 7+ projects across Risk Management, leading design and delivery of Enterprise Risk Management (ERM) platform services: Java (Spring Boot) microservices, REST APIs and Kafka event-driven integrations with React/Angular front ends.
- Lead and mentor a team of 6+ engineers; established quality gates and code-review standards, including review of AI-generated code (GitHub Copilot, Devin) against quality and security standards.
- Partner with senior stakeholders on feasibility analysis, IT planning and risk technology architecture decisions.
- Own technology risk with full accountability, keeping applications compliant and reliable in a regulated banking environment.

Officer — Software Engineer (Java) Jan 2022 – Mar 2025

- Built and maintained production full-stack systems in Java (Spring Boot, Spring MVC, Hibernate, MySQL), Kafka and React/Angular, supporting finance and risk workflows for 1,000+ internal users.
- Integrated Elasticsearch search capabilities and optimised data retrieval pipelines.
- Delivered CI/CD automation (Jenkins/Harness, Maven/Gradle) with SonarQube quality gates and JUnit/Mockito unit testing; led systematic codebase optimisation.
- Mentored junior developers and worked cross-functionally with business stakeholders to align technical solutions with domain requirements.

Appian Consultant · Princeton Blue Inc.

Jan 2021 – Jan 2022

Pune, Maharashtra

- Led Appian development for a global US-based finance client, delivering workflow automation for Trader Master, Account Master and Broker Master systems.
- Engineered complex features including bulk Murex Portfolio Creation via integration calls and nested Stipend structures for Trader/Analyst onboarding via Workday.
- Owned large-scale deployments across environments and trained new hires, reducing ramp-up time and maintaining zero-defect go-lives.

Software Engineer · Persistent Systems Limited

Jul 2019 – Jan 2021

Nagpur, Maharashtra

- Built and maintained Appian applications for business-critical workflows: Call-Distribution Systems, Legal Entity Manager, Security Master and LP Transfers.
- Implemented Elasticsearch integration, Salesforce-based bank account automation and a hybrid Appian-database model across multiple client projects.
- Translated requirements into clean, testable code; wrote unit tests and resolved performance bottlenecks through algorithmic improvements.

PROJECTS

Tyche · Job-market analysis tool for engineers

shreyaach25.github.io/tyche-site

Python · FastAPI · React · TypeScript · Vite · Postgres (Neon) · Adzuna API

- Built a tool that compares an engineer's profile against live hiring data, ranks 11 locations on hiring momentum, pay uplift, visa ease and matching roles, and scores employers on skill overlap and seniority.
- Wrote a job-posting parser that extracts required vs nice-to-have skills, mapping 130+ skill aliases; generates upskilling plans ranked by how many extra roles each skill unlocks.
- Tracks hiring trends by comparing live postings per company over rolling four-week windows; résumés are parsed in memory and never stored.

EDUCATION

M.Tech — Artificial Intelligence & Machine Learning
BITS Pilani · 2025 – 2027 (in progress) · Specialisations: NLP, Unsupervised Deep Learning

B.E. — Information Technology
Gyan Ganga Institute of Technology & Sciences (RGPV) · 2019

AWARDS & RECOGNITION

- Citi Gratitude Gold Award (multiple)
- Citi Team Anchor Award
- Citi Succeeds Together Award
- Princeton Blue Spotlight Award
- Persistent Systems Bravo Team Award

CERTIFICATIONS

- Appian Certified Senior Developer (L2), 2020
- Appian Certified Associate Developer (L1), 2019
